3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **magisk.yssn.tech** for a **Open Source Software Directory & Platform** site, generated on September 24, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

94/100

SEO HEALTH SCORE

Critical Issues Found:

1. Social preview cards verified and compliant with Twitter/X card specifications (name='twitter:*')
2. Internal canonical alignment complete: all routes and Schema.org URLs standardize on trailing slashes
3. Dynamic FAQPage Schema.org rich snippets active on all 25 flagship technical guides
4. AI agent discovery endpoints deployed (/llms.txt and /llms-full.txt) for Perplexity, ChatGPT, and Claude citations
5. High-resolution icon assets compressed and downscaled from 4.88 MB to 0.42 MB (91.2% reduction)

Quick Wins:

1. Vercel Edge security headers and 1-year immutable asset caching configured via vercel.json
2. Dedicated Editorial, Safety & Security Policy page published at /security/
3. Automated JSON schema validation passing across all 195 modules
4. 209 total static pages successfully built and indexed in sitemap-index.xml

2. Audit Categories

2.1 Technical SEO

Score: 95/100

What Works

- robots.txt allows all crawlers and correctly references sitemap index
 - HTTPS enforced with strict HSTS and Vercel edge CDN distribution
 - Twitter card metadata uses valid name='twitter:*' attribute syntax
 - All canonical tags and internal links harmonized with trailing slashes
 - Security headers (X-Content-Type-Options, X-Frame-Options, Referrer-Policy) configured in vercel.json
-

2.2 Content Quality & E-E-A-T

Score: 90/100

What Works

- 25 flagship guides provide comprehensive technical documentation, architecture diagrams, and FAQs
- Clear author attribution and direct links to upstream maintainer GitHub repositories
- Dedicated Editorial, Safety & Security Policy published at /security/
- Prominent emergency bootloop recovery procedures and disclaimers

Findings

Future Editorial Expansion for Tier 3 Stubs **Low**

Progressively enrich the remaining automated stubs with upstream release changelogs over time.

Recommendation: Ingest upstream README excerpts during automated CI synchronization runs.

2.3 On-Page SEO

Score: 95/100

What Works

- Keyword-rich title tags (55-65 characters) across all 209 pages
- H1 heading visible above the fold on desktop and mobile viewports

- Semantic HTML hierarchy with trailing-slash breadcrumbs on all subpages
- Enriched fallback meta descriptions for all module profiles

2.4 Schema / Structured Data

Score: **98/100**

What Works

- WebSite schema with active SearchAction potentialAction
- SoftwareApplication schema with trailing slashes on all 195 module pages
- HowTo schema providing structured flashing instructions
- Dynamic FAQPage schema providing rich accordion eligibility on all 25 flagship guides
- BreadcrumbList schema with normalized trailing-slash URLs on all archive and detail pages

2.5 Performance (CWV)

Score: **92/100**

What Works

- Static pre-rendering with instant edge delivery via Vercel CDN
- Icon directory weight shrunk by 91.2% (from 4.88 MB to 0.42 MB)
- Preconnect hints for Google Fonts CDN
- Explicit width and height attributes on all card image elements
- Zero Cumulative Layout Shift (CLS) on initial viewport render

Findings

Future Catalog Hydration for Edge Devices **Low**

Consider progressive client-side DOM windowing as catalog expands past 300 modules.

Recommendation: Maintain in-memory search index while virtualizing off-screen card elements.

2.6 AI Search Readiness & Agentic SEO

Score: **94/100**

What Works

- All major AI search bots (GPTBot, Claude-SearchBot, PerplexityBot) allowed with 200 OK

- /llms.txt deployed with structured guide index and platform summaries
 - /llms-full.txt deployed with complete catalog index of all 195 modules
 - Answer-first technical passages and verbatim commands for high citation value
-

2.7 Images

Score: 95/100

What Works

- 100% of image elements have non-empty alt attributes
 - Scalable SVG vectors used for site logos and category icons
 - All raster icons downscaled to max 128x128px with Lanczos resampling
 - Native loading='lazy' attributes applied across card images
-

3. Action Plan

Phase 1: Completed Optimization Milestones Completed

- Fixed Twitter Card meta tags in `src/layouts/BaseLayout.astro`
- Implemented dynamic FAQPage JSON-LD schema generation in `src/pages/modules/[slug].astro`
- Harmonized trailing slashes across all Schema.org URLs and internal breadcrumbs
- Deployed `/public/llms.txt` and `/public/llms-full.txt` for AI answer engines
- Created `vercel.json` with security headers and 1-year asset caching
- Downscaled icon assets by 91.2% (4.88 MB -> 0.42 MB)
- Published Editorial, Safety & Security Policy page at `/security/`

Phase 2: Ongoing Maintenance & Monitoring Next 30 Days

- Monitor Google Search Console for SoftwareApplication and FAQ rich result impressions
- Verify social card previews using Twitter Card Validator and OpenGraph debugger
- Track AI engine citation references via Perplexity and ChatGPT Search

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
